Preliminary Amendment

Serial No.: (PCT/DK2004/000712) Docket No.: 66386-377-7 April 17, 2006

IN THE CLAIMS:

1. (Currently Amended) An adjustable regulator insert (2) for valves

(1), in particular for controlling the liquid flow in a plant for central

heating or air conditioning, said insert (2) comprising inflow openings (8)

and outflow openings (9), wherein the outflow openings (9) are closed

off in response to the a difference in pressure across the insert (2) under

the influence of a spring (15) that seeks to keep the outflow openings (9)

open, said insert (2) being furthermore provided with including means

for adjustably closing off the inflow openings (8), characterised in that,

wherein the insert (2) is configured such that a certain degree of

adjustable closure of the inflow openings (8)-entails a compression of the

spring (15) which is inversely proportionate proportional with the closure.

2. (Currently Amended) An insert according to claim 1, characterised in

that—wherein the inflow openings (8) and the outflow openings (9) are

configured in a cup-shaped part (7), and that the outflow openings (9)

are closed off by a roller membrane (13).

3. (Currently Amended) An insert according to claim 2, characterised in

that wherein the closure of the inflow openings (8) takes place via an

axially displaceable closure skirt (10); and that the one end of the spring

(15)-abuts against the closure skirt (10).

4

Preliminary Amendment

Serial No.: (PCT/DK2004/000712) Docket No.: 66386-377-7

April 17, 2006

4. (Currently Amended) An insert according to claim 3, characterised in

that wherein the axially displaceable closure skirt (10) is, via a thread,

connected to a shaft (18)-that extends out of the insert (2).

5. (Currently Amended) An insert according to any one of claims 1-4,

characterised in that claim 1, wherein the insert (2) is provided with

includes an indicator element (21) that shows the degree of closure of

the inflow openings (8).
